

Release Notes

NX System Release 6.1

April 13, 2006

Component Versions

NX System Release 6 consists of the following component versions:

- NX Editor Version: 1.0.6.94
- NX Tester Firmware Version: 2.0.89

New Features and Enhancements

NX System Release 6.1 contains the following new feature:

- **Saving System Log to Memory Card:** The Diagnostics Menu of the NX Tester now has an entry labeled SYSLOG – this will copy the contents of the system log to the memory card. This feature may be useful in helping Dynalab support personnel analyze problems reported by customers.

Bug Fixes

NX System Release 6.1 includes a fix for the following problem:

- The NX Tester Firmware version included in the previous release (Release 6, Firmware Version 2.0.82), has a bug that results in re-testing of the wire harness whenever a short error is encountered. This can lead to unnecessary additional testing time for large wire harnesses, especially on fixtures that have intermittent connections. Release 6.1 (Firmware version 2.0.89) fixes this problem.

IMPORTANT NOTES:

Before updating your NX Testers to Release 6.1, please make sure that all programs are backed up.

If you have already installed NX Editor Version 1.0.6.94 from Release 6, it is not necessary to update your NX Editor – only the firmware needs to be updated.
